                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Heterodera glycines
Eukaryota; Metazoa; Nematoda; Chromadorea; Tylenchida; Tylenchina;
Tylenchoidea; Heteroderidae; Heteroderinae; Heterodera.
                               /note="Vector: pAMP1 (Gibco); Site_1: NotI; Site_2: SalI; The library was constructed by Brandi Chiapelli and Dr. James McCarter at Washington University, St. Louis. The cDNA was made by using Dynabead oligo-dT priming (Dynal). PCR based library using a modified protocol from the SMART PCR cDNA Synthesis Kit from Clontech. Directionally cloned into the UDG sites of pAMP1. Nematodes are the OP25 strain. Frozen J2 nematodes were provided by Dr. Rick Pavis of Parents of Strain.
Davis of North Carolina State University"

/note="Vector: pSPORT1; Site_1: Not1; Site_2: Sal1; This
/note="Vector: pSPORT1 year from mRNA isolated from
somatic embryos (age ranging from 2 months to 9 months)
cultured on MSD 20. The library was prepared using the
Life Technologies pSuperScript cDNA library construction
kit. Complementary DNA was synthesized from mRNA using a
poly (dT) sequence with a Not1 restrictions site. Sal1
linkers adapters were ligated to the blunt-ended cDNA
fragments followed by Not1 digestion. The cDNA fragments
were directionally cloned into the Not1-Sal1 restriction
site of the pSPORT1 vector. The ligated cDNA fragments
were transformed into E.coli ElectroMax DH10B host cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          est@watson.wustl.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative electrophoresis. Vector DNA was prepared from a derivative of pMD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and with adaptors complementary to the insert adaptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /lab host="E.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     primer-adapter (5'-pgACTAGATICGGAGCGGCCC(T)15-3'
b. Double-stranded cDNA was ligated to Sal I adapter,
digested with NotI and cloned into the pSPORTI vector
pre-cut with NotI and Sall. c. The ligation mix was
transformed into DH10B cells. d. The cells were grown in
SCC=5g yeast, 20g tryptone, 0.5g NaCl, 10mM MgSO4, 10mM
MgCl, 0.2% glucose/liter, (no antibiotic) e. DMSO was
added to a final conc. of 10% as a cryoprotectant and
frozen. f. The titre before freezing was determined as
1500/100ul. Assuming a 10% loss upon freezing, the titre
is probably ~ 13500clones/ul g. 3 tubes each containing ~
13500 clones/ul [=total of ~40,500] are enclosed. h. The
frequency of vectors containing inserts is 90% as
determined by digestion check after picking 20 clone,
miniprep and subsequent digestions with NotI and Sal I. i.
A low level of 32P was used in the CDNA synthesis
procedure. The level measured by holding a Geiger Counter
next to a tube was background."

/clone="Vector: piggyBac WH (GenBank accession number
/note="Vector: piggyBac WH (GenBank accession number
AY515148); An isogenic w- Drosophila melanogaster strain
was mutagenized by remobilization of transposable
elements. We remobilized the WH element using the
constitutive alpha-1 tubulin:piggyBac transposase source.
We remobilized the WH element from a single ammunition
element on the Binsinecy balancer chromosome in dysgenic
females. We outcrossed dysgenic virgin females in vials to
the isogenic w- strain and selected new hops in the
following generation. All lines were mapped to a
chromosome by standard genetic methods, examined for
homozygous viability, and used for recovery of flanking
genomic sequence by inverse PCR."

It indicates an insertion close to or within gene At3912400. Details on the protocols used for generation of the sequence are Details on the protocols used for generation of the sequence are described in References 1-3. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated

/note="PCR was performed on DNA from Arabidopsis thaliana plants (T1) which were transformed with the T-DNA from vector pGABI1 (GenBank accession number: AY529716). The
                                                                                                                                                                                          lines contain one or more T-DNA insertions. The DNA fragment(s) resulting from the PCR were directly sequenced to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       quality sequence stop: 39.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli X110-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /lab_host="E.                                   Submitted (23 OCT-2003) Balzergue S., UMRGV, INRA/CNRS, 2 rue
Gaston Cremieux, 91057 Evry cedex, FRANCE
PCR was performed on DNA from transformants of Arabidopsis thaliana
plants from INRA (Versailles). The DNA fragment(s) resulting from
the PCR were directly sequenced from the left or the right border
to determine the genomic sequence flanking the insertion. T-DNA
derived sequences were removed. Information to order the
corresponding mutant line and a link to a database providing a
graphical display of the insertion site are available at
http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
been generated in the framework of the French plant genomics
program 'Genoplante' (http://www.genoplante.com and
http://genoplante-info.infobiogen.fr).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    37
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                15;

/note="Vector: piggyBac PB (GenBank accession number / Note="Vector: piggyBac PB (GenBank accession number AY515146); An isogenic w- Drosophila melanogaster strain was mutagenized by remobilization of transposable elements. We remobilized the PB element using Hsp70:piggyBac transposase from a single ammunition element on either the X or third chromosome. We induced transposase expression by immersing bottles in a circulating 370C water bath for a daily (days 3-10 after egg-laying) 1-h heat shock. We outcrossed the resulting dysgenic males to an isogenic w- strain. New insertions were identified on the basis of a change in eye color (third chromosome ammunition) or the appearance of w+ male progeny (X chromosome ammunition). All lines were mapped to a chromosome by standard genetic methods, examined for homozygous viability, and used for recovery of flanking genomic sequence by inverse PCR."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Conservative
                     http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwn42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                    PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at http://dbsgap.versailles.inra.fr/publiclines/. This sequence has been generated in the framework of the French plant genomics program 'Genoplante' (http://www.genoplante.com and http://genoplante-info.infobiogen.fr).

Islam,H., Longacre,S., Mahmoud,M., Meenen,E., Pedersen,T., Reilly,M., Rose,M., Rose,R., Stokes,R., Tingey,A., von Niederhausern,A. and Wright,D.,Weiss,R. Mouse whole genome scaffolding with paired end reads from 10k Nouse whole genome scaffolding with paired end reads
                                                                                                                                                                                                    was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored mouse DNA was annealed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Biomedical Polymers Research Bldg.,

                                                                                                             S
                                                                                                                                                                                                                                                                       CC A novel composition has been produced which comprises a bivalent CC polypeptide having an amino acid residue sequence of formula: V - V CC where V = an antigen binding site; X = an amino acid residue sequence of 5 to 120 amino acid residues. The present sequence represents the PCR CC primer BCl used in the preparation of anti-CD3 monospecific tetravalent cantigen-binding polypeptide. The polypeptides can assume a conformation having a binding site specific for a preselected or predetermined ligand such as an antigen, hapten or enzymatic substrate. They can be used in diagnostic assays and also for prophylactic or therapeutic applications. The bivalent antibodies can also be used for activating and crosslinking T cells in vitro or in vivo. The polypeptides exist in stable conformations and bind to target molecules with high avidity while conformations and bind to target molecules with high avidity while conformations and bind to target molecules with high avidity while conformations and bind to target molecules with high avidity while conformations and bind to target molecules with high avidity while conformations and bind to target molecules with high avidity while conformations and bind to target molecules with high avidity while conformations and bind to target molecules with high avidity while conformations are provided functional molecules which can circulate in the body for longer periods of time than their Fab counterparts
                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                          The invention relates to novel Mowgli G-protein coupled receptor (GPCR) polypeptides and polynucleotides. Mowgli polypeptides, nucleic acids, probes, antibodies, expression vectors and ligands are useful as biosensors, for detection, diagnosis, or treatment of diseases associated with over-, under- or abnormal expression of Mowgli GPCR in tissues, in genetic analysis and in chromosome identification. Polypeptides of the invention may be used for screening compounds which bind the receptor and which activate (agonists) or inhibit (antagonist) activation of Mowgli. They may further be used as vaccines to induce immunological response to produce antibody and/or T cell immune response against e.g. bacterial, protozoan, fungal or viral infections, pain, cancers, diabetes, obesity, anorexia, asthma, Parkinson's disease and other neurological disorders. The present sequence is human Mowgli G-protein coupled receptor DNA camplifying PCR primer used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the transposon vector transposes into the DNA. The method is useful for altering deoxyribonucleic acid (DNA) in Sorangium host cell, for example so that the cells produce useful molecules such as polyketides. The current sequence represents a primer used in an example from the invention in the cloning of the C. carnea mariner transposase gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 33
                                                                                                                                                                                                                                                                                                                       New Mowgli G-protein coupled receptor polypeptides and polynucleotides, useful for inducing immunological response to produce antibody and/or {\tt T} cell immune response against e.g. bacterial, fungal, protozoan or viral
                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2003-129261/12.

                                                                                                                         Ş
                                                                                                                                                                                 CC capacity for controlling DNA damage-responding gene expression of a capacity for controlling DNA damage-responding gene expression of a CC promoter, and an expression cassette for a plant. The invention describes are expression cassette for a plant for expressing an exotic gene, by responding to DNA damage containing the above promoter and a site for inserting an exotic gene, so that said exotic gene is linked to said promoter expressably. Also described is a recombinant plasmid for promoter expressably. Also described is a recombinant plasmid for expressing an exotic gene by responding to DNA damage containing the above promoter and an exotic gene linked expressably to said promoter, a concept of the expression responding to DNA damage is desired including a step of transformed plant cell, and a transformed plant cell prepared by the containing a plant cell, and a transformed plant cell transformed by the method. The method is used for acquiring a plant cell transformed by an exotic gene. The present sequence represents Arabidopsis thaliana contains a plant cell present sequence represents Arabidopsis thaliana contains a plant cell present sequence represents Arabidopsis thaliana contains a plant cell present sequence represents Arabidopsis thaliana contains a plant cell present sequence represents Arabidopsis thaliana contains a plant cell present sequence represents Arabidopsis thaliana contains a plant cell present sequence represents a plant cell can be contained by the contained by the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC The present invention relates to a cis control sequence showing a CC capacity for controlling DNA damage-responding gene expression of a CC higher plant, a plant (Arabidopsis thaliana) DNA damage-responding CC promoter, and an expression cassette for a plant. The invention describes CC an expression cassette for a plant for expressing an exotic gene, by CC responding to DNA damage containing the above promoter and a site for CC inserting an exotic gene, so that said exotic gene is linked to said CC promoter expressably. Also described is a recombinant plasmid for CC expressing an exotic gene by responding to DNA damage containing the CC expressing an exotic gene by responding to DNA damage containing the CC above promoter and an exotic gene linked expressably to said promoter, a CC method for acquiring a plant cell transformed by an exotic gene wherein a CC expression a plant cell with the above recombinant plasmid to get a CC transformed plant cell with the above recombinant plasmid to get a CC transformed plant cell, and a transformed plant cell prepared by the CC above method. The method is used for acquiring a plant cell transformed coll by an exotic gene. The present sequence represents a primer used in the CC examples of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The invention describes CC an expression cassette for a plant for expressing an exotic gene, by CC responding to DNA damage containing the above promoter and a site for CC inserting an exotic gene, so that said exotic gene is linked to said CC promoter expressably. Also described is a recombinant plasmid for CC expressing an exotic gene by responding to DNA damage containing the above promoter and an exotic gene linked expressably to said promoter, a CC method for acquiring a plant cell transformed by an exotic gene wherein a CC specific expression responding to DNA damage is desired including a step CC of transforming a plant cell with the above recombinant plasmid to get a CC transformed plant cell, and a transformed plant cell prepared by the CC above method. The method is used for acquiring a plant cell prepared by the examples of the present sequence represents a primer used in the crowd or containing a plant cell present sequence represents a primer used in the crowd or containing a plant cell present invention crowd or containing a plant cell present invention crowd or containing a plant cell transformed containing a plant cell present invention crowd crowd containing a plant cell transformed containing a plant ce

markers Identifying animal genetic marker that influences trait for determining parentage or to infer breed/line in e.g. canines involves analyzing markers of genome-wide genetic marker map for association with genetic

WPI; 2005-333502/34

Claim 45; SEQ ID NO 353; 145pp; English

CC series of oligonucleotides that bind at or near a genomic location of the series of companion animal SNPs, a mechanism for moving the solid support or other hybridization medium, and a liquid handling CC mechanism for applying a liquid to the series of oligonucleotides, CC diffected by the nucleotide to a polynucleotide to a liquid handling CC determining nucleotide occurrences of the SNP; (ii) a kit for CC determining nucleotide occurrences of canine SNPs, comprising an CC oligonucleotide occurrence of at least one canine SNPs, comprising an CC distances given as SEQ ID Nos 1-101 in the specification; (iii) a determining to the most 3' position of nucleotide or complement in the most 3' position of nucleotide or complement in the specification; (iii) a computer-based method for identifying/inferring a trait of CC complement in the nucleotide occurrence of at least one successive of a canine state one nucleotide occurrence of at least one successive of corresponding to the first nucleotide, or complement is to first nucleotide, or complement is to first nucleotide occurrence of at least one SNP corresponding trait of CC acain to the first nucleotide, or complement its in the most 3' position of nucleotide sequences in SEQ ID Nos 1-101, searching a CC optionally storing to the first nucleotide, or complement its in the most 3' consistion of nucleotide sequences in SEQ ID Nos 1-101, searching a computation may be subsequently accessed and viewed by the user, and identifying the trait of a canine subject; (v) an isolated with a CC sadditional nucleotide sequences in SEQ ID Nos 1-101; to complement its complement CC with nucleotide sequences in SEQ ID Nos 1-101; or a first nucleotide or its complement CC derived from a canine subject, or a first nucleotide or its complement CC orresponding to the first nucleotide or complement in the most 3' position of any one of the nucleotide or its complement CC orresponding to the first nucleotide or complement in the most 3' position of a nucleotide or the first nucleotide companion animal genetic markers of a genome-wide genetic marker map for association with the genetic trait and identifying the companion animal genetic marker that influences the trait. Also described are: (i) a high throughput system for determining the nucleotide occurrences at a series The invention relates to a method of identifying of companion animal SNPs comprising a hybridization medium containing a marker relates to a method of identifying a companion animal that influences a phenotype or trait comprising analyzing

```
cc identifying in the nucleic acid sample at least one SNP corresponding to cidentifying in the nucleic acid sample at least one SNP corresponding to corresponding to each SNP identified, and comparing the alleles to corresponding to each SNP identified, and comparing the alleles to corresponding to each SNP identified, and comparing the alleles to comparing the least one allele in common with the test subject are excluded, and (x) the use of a first primer selected from SEQ ID Nos 102-203, and a second primer selected from SEQ ID Nos 102-203, and a comparing the method of the cinvention. The method is useful for identifying a companion animal comparing to an invention. The method is useful for identifying a companion animal comparing to an invention, susceptibility to infection, regulation of immune status and cresponse to antigens, previous exposure to infection or parasites, companion animal (preferably dogs, cats, fish, reptiles, birds, horses, cantoimmune disorders, kidney disease and neurological disease in companion animal (preferably dogs, cats, fish, reptiles, birds, horses, candidate, maximizing individual potential performance and health, allowing predictive (predisposition) diagnostics, mutritional therapies and collective (predisposition) diagnostics, mutritional naimal owners and collective profits related to selling a companion animal owners and collective such as energy metabolism, aging and breed-specific traits to track a companion animal profits, to track a companion animal or of specific traits to track a companion animal or of specific traits to track a companion animal or of specific traits to track a companion animal or of specific traits to track a companion animal or of specific traits to track a companion animal or of specific traits to track a companion animal or of specific traits to track a companion animal or of specific traits to track a companion animal or of specific traits to track a companion animal or of specific traits to track a companion animal or of specific traits or the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequence in SEQ ID Nos 1-101; (viii) generating a genome discovery map involving selecting several SNP markers corresponding to the first nucleotide or complement in the most 3' position of any one of nucleotisequence in SEQ ID Nos 1-101, each marker in the series separated by
genetic trait, to track a companion animal or offspring, and to dia
a health condition of a companion animal. This sequence represents
extension primer used for the detection of canine SNPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 150000 bp, and generating the genome discovery map based upon the selected markers; (ix) identifying the parentage of a canine test subject involving obtaining a nucleic acid sample from the test subject by identifying in the nucleic acid sample at least one SNP corresponding to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleotide

                                                                                                                                The present sequence is that of PCR primer INGEN 8_3, corresponding to nucleotides 2544-2565 of the hamster islet neogenesis gene associated protein (INGAP) gene. It is one of a set of primers (see ACF05852-71) used to generate PCR fragments of the INGAP gene, which were subsequently sequenced to determine the nucleotide sequence (see ACF05851) of the INGAP 5' regulatory region, the introns, the intron/exon junctions, and the 3' polyadenylation region. The 5' regulatory region of the INGAP gene is susceptible to modulation by many known transcription factors, and is used in claimed screening assays to identify agents capable of modulating INGAP gene expression. These modulating agents have potential as therapeutic agents for treating type 1 and type 2 diabetes mellitus, endocrine and non-endocrine hypoplasia, hypertrophy, adenoma, neoplasia
                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                         New isolated INGAP nucleic acid, useful for diagnosing and treating disorders associated with reduced islet cell function and/or aberrant expression or activity of INGAP, such as type II diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        11-JAN-2002; 2002US-0346898P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention discloses a microarray comprising a plurality of nucleic cc acid probes including one of 2,018,500 fully defined sequences, or its perfect match, perfect mismatch, antisense match or antisense mismatch. CC Also disclosed is a method of gene expression analysis. The array is used compounds: The nucleic acid probes are specifically designed for analysis of genetic variation or in hybridisation to a DNA library, compounds: The nucleic acid probes are specifically designed for analysis of at least one target sequence. The method of analysis comprises compounds: The content of the method of analysis comprises of a probes and detecting the hybridisation. The nucleic acid probes and the hybridisation. The nucleic acid grobes are attached to a solid support. The analysis comprises monitoring gene expression levels, identifying biallelic markers or polymorphisms, comparisor acid gene expression levels, identifying biallelic markers or polymorphisms, comparisor acid gene expression to identify or detect the sequence. Each of the nucleic acid solid surport at stag sequence. The array of nucleic acid probes is useful in in situ hybridisation, in Southern, Northern or dotlothybridisation to identify or detect the sequence or specific mutations of any gene, in mapping the 5' termini of mRNA molecules by primer extensions or in screening cDNA or genomic libraries or subclones for additional subclones containing segments of DNA that have been concleic acid probes incorporated in the microarray. Note: The sequence or specific acid at for this patent can also be obtained in electronic format directly at a gardara unarto, acceptance at the sequence of the sequence at a gardara unarto, acceptance at the sequence of the sequence at a gardara unarto, acceptance at the sequence of the sequence at a gardara unarto, acceptance at the sequence of the sequence at a gardara unarto, acceptance at the sequence of the sequence at a gardara unarto, acceptance at the sequence of the sequence at a gardara unarto, acceptance at the
